

PROOF — Cohesion Pass B

Visual Consistency Audit

GOAL

Every page should look like it was designed by one person in one sitting. Right now each page was built in a separate prompt, so there's subtle drift — different heading sizes, inconsistent spacing, tier colors that don't quite match. This pass normalizes everything to one visual system.

TYPOGRAPHY NORMALIZATION

Audit every page and enforce these exact type specs. If any heading, label, or body text deviates, fix it.

Page titles (one per page):

- Font: `var(--font-playfair)` (Fraunces)
- Desktop: 48px, weight 700, color `var(--color-cream)`
- Mobile: 32px
- Pages: "The Library", "Hunt Map" heading in overlay, dashboard "Welcome back"

Eyebrow labels (above page titles):

- Font: `var(--font-dm-sans)`, 12px, weight 600, uppercase, letter-spacing 0.15em
- Color: `var(--color-accent-amber)`
- Every page with a title should have one: "BOTTLE INTELLIGENCE", "LIVE DASHBOARD", etc.
- Exception: the map page (immersive, no header section)

Section headings (within pages):

- Font: `var(--font-playfair)`, 24-28px, weight 700, color `var(--color-cream)`
- Examples: "Live Feed", "My Watchlist", "Recent Activity", "Questions"

Body text:

- Font: `var(--font-dm-sans)`, 14px, weight 400, color `var(--color-text-secondary)`

Data/numbers:

- Font: `var(--font-jetbrains)`, used for ALL prices, timestamps, stats, proof numbers, multipliers, counts
 - Audit every page: if any number is NOT in JetBrains Mono, fix it
-

SPACING NORMALIZATION

- **Top padding below nav:** 120px on every page (Landing, Bottles, Dashboard). Audit all three.

- **Section gaps:** 64px between major sections on desktop, 40px on mobile. Consistent across all pages.
 - **Card internal padding:** 24px on all cards (bottle cards, dashboard stat cards, watchlist items, feed items). No card should have less.
 - **Grid gaps:** 24px between cards in all grids (bottle grid, stat card grid). Consistent.
 - **Page horizontal padding:** clamp(20px, 5vw, 48px) on all pages. Audit.
 - **Max-width containers:** Landing page, bottles page, dashboard all use a consistent max-width (1200px). Verify.
-

TIER COLOR SYSTEM AUDIT

The tier system (unicorn/allocated/limited) must use identical colors on every surface. Audit every instance and normalize to these exact values:

Unicorn:

- Dot/indicator: #C4943A (amber)
- Badge bg: rgba(196,148,58,0.15), text: #C4943A, border: rgba(196,148,58,0.3)
- Card top border: 3px solid #C4943A
- Card bg tint: rgba(196,148,58,0.03)
- Map marker: fill #C4943A
- Feed left border: #C4943A

Allocated:

- Dot/indicator: #B87333 (copper)
- Badge bg: rgba(184,115,51,0.15), text: #B87333, border: rgba(184,115,51,0.3)
- Card top border: 3px solid #B87333
- Card bg: standard (no tint)
- Map marker: fill #B87333
- Feed left border: #B87333

Limited:

- Dot/indicator: #8A8A8A (muted silver)
- Badge bg: rgba(138,138,138,0.12), text: #8A8A8A, border: rgba(138,138,138,0.25)
- Card top border: 3px solid #8A8A8A
- Card bg: standard, slightly dimmer text opacity (0.85)
- Map marker: fill #6B6560
- Feed left border: #8A8A8A

Check every instance across: DropFeed.tsx, BottleCard.tsx, BottleDetail.tsx, DashboardFeed.tsx, DashboardSidebar.tsx, MapOverlayRight.tsx, StorePopup.tsx, HuntMap.tsx marker styling. If ANY of these use different values for the same tier, fix them.

EMPTY STATES

Design warm, encouraging empty states for when there's no data to show. Every empty state uses the same pattern:

- Centered in the container where content would normally be
- A short message in Fraunces 18px, cream (e.g. "Your watchlist is empty")
- A subtitle in DM Sans 13px, muted (e.g. "Add bottles from The Library to start tracking drops")
- A CTA button below (ghost style amber outline, e.g. "Browse The Library")
- No sad faces, no error icons, no gray boxes — keep it warm and minimal

Pages that need empty states:

- **Dashboard watchlist:** "Your watchlist is empty" + "Browse The Library" CTA
- **Dashboard live feed** (if no drops in time window): "No drops detected recently" + "Check the Hunt Map" CTA
- **Dashboard activity timeline** (no events): "No recent activity" + subtle message
- **Bottles page search with no results:** "No bottles match your search" + "Clear filters" button
- **Map with no active stores:** "No stores active today" message in the left panel (already partially there)

MAP VISUAL FIXES

- **Add Navigation component** to /map page if missing — the nav must be present on every page
- **Override Leaflet popup CSS:** remove white background on .leaflet-popup-content-wrapper, remove the white tip triangle on .leaflet-popup-tip, set wrapper bg to var(--color-card-bg), border to var(--color-card-border), border-radius 12px, text color to var(--color-text-primary)
- **Restyle Leaflet zoom controls:** dark bg (var(--color-card-bg)), amber text (var(--color-amber-rich)), border matching cards, border-radius 8px
- **Fix bottle name duplication** in map feed and popups — use the shared cleanBrandName function
- **Fix '0 stores active today' stat** — either widen to 48 hours or change label to 'this week' to match reality
- **Render all unique stores from drops.json** — not one per county. The Raleigh area alone should have 15+ markers.
- **Add tier-colored left borders** to Recent Drops feed items in the right panel (amber/copper/gray matching tier)
- **Reduce Leaflet attribution opacity** to 0.4 or style it dark to match the theme

Do not add new features in this pass. Only normalize, fix, and align existing elements.
