

PROOF — Phase 1, Prompt 2 of 6

Bottle Intelligence Page • /bottles

CONTEXT

You are building the **/bottles** page for Proof — a bourbon drop tracking platform. This page is **members-only** (Standard Proof and Bottled in Bond tiers). It is the bourbon encyclopedia of Proof: a browsable, searchable reference of every allocated, limited, and unicorn bottle we track, with pricing intelligence, rarity data, and drop history.

This is a premium feature behind a paywall. It must **feel** premium — not like a basic HTML table. Think Bloomberg Terminal meets a whiskey library. Dense but beautiful. Exclusive but usable.

DESIGN SYSTEM (USE WHAT EXISTS)

All tokens are defined in `globals.css`. **Never hardcode hex values.** Use `var(--token-name)` via inline style objects. Use Tailwind for layout/spacing only. Colors and fonts go in `style={{}}`.

Fonts (actual loaded fonts):

- `var(--font-playfair)` — Fraunces. Headings, bottle names, section titles.
- `var(--font-dm-sans)` — Plus Jakarta Sans. Body, labels, buttons, UI text.
- `var(--font-jetbrains)` — JetBrains Mono. Prices, data points, multipliers, counters.

Key color tokens:

- `--color-bg-primary`: `#0D0B07` — Page background
- `--color-bg-secondary`: `#0A0806` — Deeper surfaces
- `--color-accent-amber`: `#C4870A` — Primary accent
- `--color-amber-rich`: `#C4943A` — Warm amber (borders, highlights)
- `--color-cream`: `#F5EDD6` — Primary text / headings
- `--color-text-secondary`: `#C4BBB5` — Body text
- `--color-text-tertiary`: `#6B6560` — Muted / hint text
- `--color-card-bg`: `rgba(36, 30, 25, 0.9)` — Card backgrounds
- `--color-card-border`: `rgba(212, 146, 11, 0.18)` — Card borders

Existing patterns to follow:

- Use `ScrollReveal` for scroll-triggered reveals
 - Use `staggerContainer` + `fadeUpVariant` from `@/lib/animations` for staggered grid reveals
 - Cards hover: `scale: 1.02` + border glow transition
 - Tier colors: Unicorn = amber/gold, Allocated = copper (`#B87333`), Limited = muted silver (`#8A8A8A`)
 - The grain overlay and ambient glow from `globals.css` apply site-wide — do not remove or duplicate
-

PAGE STRUCTURE

Route: `src/app/bottles/page.tsx`

Layout: Full page with Navigation + Footer (import from existing components)

Access: Visible to all but with a members-only gate. Free users see the page structure and a few blurred/teaser cards. Full data requires Standard Proof or higher.

Top: Page Header

- Eyebrow: "BOTTLE INTELLIGENCE" — uppercase, DM Sans, 12px, letter-spacing 0.15em, amber
- Title: "The Library" — Fraunces, large (48-56px on desktop), cream
- Subtitle: one line, muted, e.g. "MSRP, secondary market value, rarity, and drop frequency for every bottle we track."
- Below subtitle: live count — "Tracking 45+ bottles across 3 tiers" in JetBrains Mono, small, amber

Search and Filter Bar

A horizontal bar below the header. This is a key UX element — it must feel like a premium tool, not a generic search box.

- **Search input:** Full-width dark input with subtle amber border on focus. Placeholder: "Search bottles..." Magnifying glass icon (Lucide). Debounced filtering (300ms).
- **Tier filter pills:** Row of clickable pills: All | Unicorn | Allocated | Limited. Active pill gets filled amber bg + dark text. Inactive pills are ghost-style (border only). Each pill shows count in parentheses, e.g. "Unicorn (12)"
- **Sort dropdown:** Small select or custom dropdown. Options: "Name A–Z", "Highest Secondary Value", "Biggest Markup", "Recently Dropped". Default: "Highest Secondary Value"
- The entire bar should be sticky on scroll (sticks below the nav) with a glass/blur background matching the nav treatment

Bottle Grid

The main content area. A responsive grid of bottle cards. This is where the premium feel lives or dies.

Grid layout: 3 columns on desktop (1280px+), 2 on tablet, 1 on mobile. Gap: 20-24px. Use CSS grid with `grid-template-columns: repeat(auto-fill, minmax(320px, 1fr))`.

Bottle Card Design (this is critical):

Each card represents one bottle. The card should feel like holding a tasting card at a premium bourbon event. Not a product listing — an intelligence dossier.

Card anatomy, top to bottom:

- **Top accent bar:** 3px top border colored by tier (amber for unicorn, copper for allocated, muted for limited)
- **Tier badge:** Top-right corner inside the card. Small pill badge: "UNICORN" / "ALLOCATED" / "LIMITED". Styled like the existing TierBadge in DropFeed — frosted glass bg, colored text + dot.
- **Bottle name:** Fraunces, 18-20px, cream, bold. E.g. "Pappy Van Winkle 23 Year"
- **Distillery line:** DM Sans, 12px, muted. E.g. "Buffalo Trace Distillery" or "Old Rip Van Winkle"
- **Price intelligence block:** This is the premium data section. A mini two-column layout inside the card:
 - Left column: "MSRP" label (tiny, muted) above the price in JetBrains Mono (e.g. "\$299")
 - Right column: "SECONDARY" label (tiny, amber) above the secondary range in JetBrains Mono, amber color (e.g. "\$3,000–\$4,500")
 - Between them or below: multiplier badge (e.g. "10x") — use the same tier-colored pill style from DropFeed. This is the instant wow factor.
- **Drop frequency indicator:** A subtle visual showing how often this bottle drops in NC. Options: a tiny spark line (last 12 months of drop activity as a micro bar chart), OR a text label like "Last seen: 3 days ago" / "Avg: 2 drops/month" in small muted text. The spark line is more premium if achievable.
- **Card footer:** A thin separator line, then a row with: proof/ABV (e.g. "107 proof"), age statement if applicable (e.g. "12 yr"), and a small expand/detail arrow icon. All in DM Sans 11px, muted.

Card interactions:

- Hover: card lifts (translateY -3px), border shifts to `--color-card-border-hover`, subtle amber glow shadow
- Click: expands inline or opens a detail panel/modal (see Bottle Detail below)
- Staggered reveal on scroll using `staggerContainer + fadeUpVariant`

BOTTLE DETAIL VIEW

When a user clicks a bottle card, show a detailed view. This can be either a slide-out panel from the right (preferred for premium feel — like a Bloomberg detail pane) or a full-width inline expansion below the card. Do NOT navigate to a separate page.

Detail panel contents:

- **Header:** Bottle name (large, Fraunces), distillery, tier badge, proof, age statement
- **Price card:** Larger version of the price intelligence block. MSRP vs secondary with the multiplier prominently displayed. Add a one-line note: "Based on recent auction and secondary market data" in tiny muted text.
- **Tasting profile:** If data exists — flavor tags as small pills (e.g. "Caramel", "Oak", "Vanilla", "Cherry", "Leather"). Amber-outlined pills on dark bg. This is a nice-to-have — can be static/curated data.
- **Drop history timeline:** A vertical mini-timeline showing the last 5-10 drops of this bottle in NC. Each entry: date, store/county, quantity if known. Styled like a mini version of the How We Hunt timeline — thin amber vertical line with small dots at each event. This is extremely high-value data for hunters.

- **Availability heatmap (stretch goal):** A small map of NC counties color-coded by how frequently this bottle appears there. Dark counties = rare, amber counties = frequent. Use a simple SVG map of NC counties, not a full Leaflet map.
 - **Watchlist button:** "Add to Watchlist" / "Watching" toggle button. Amber outline when not watching, solid amber fill when watching. This is a members-only action.
 - **Close:** X button or click-outside to dismiss
-

PAYWALL / TEASER TREATMENT

Free (unauthenticated) users should see the page but with restricted data to drive conversion.

- Show the first 6 bottle cards fully visible
 - Cards 7+ are progressively blurred (same pattern as the drop feed blur wall)
 - Secondary market prices are blurred on ALL cards for free users, with a small lock icon
 - The multiplier badge is blurred for free users
 - Drop history timeline in the detail view is completely gated — show a placeholder: "Drop history is a members-only feature" with a CTA button
 - Watchlist button is disabled for free users with tooltip: "Sign up to watch this bottle"
 - After the blurred cards, show a centered CTA block: "Unlock the full library" with pricing info and a button linking to #pricing
-

DATA SOURCE

The bottle data already exists in `DropFeed.tsx` as the `BOTTLE_PRICING` constant. Extract this into a shared data file:

Create `src/data/bottles.ts` with a typed array of bottle objects:

```
interface Bottle {
  id: string; // kebab-case slug
  name: string; // Display name
  distillery: string; // Producer name
  tier: "unicorn" | "allocated" | "limited";
  msrp: number;
  secondary?: string; // e.g. "$3,000-$4,500"
  secondaryLow?: number; // For multiplier calc
  proof?: number;
  ageStatement?: string; // e.g. "23 Year"
  flavor?: string[]; // Tasting tags
  avgDropsPerMonth?: number; // Computed from drop data
  lastSeen?: string; // ISO date of last drop
}
```

Migrate the existing `BOTTLE_PRICING` data into this format. Add distillery names, proof, and age statements for each bottle (this is static reference data — fill it in manually). Flavor tags are optional but encouraged for at least the top 10 unicorn bottles. Import this data in both `DropFeed.tsx` (replace the existing constant) and `bottles/page.tsx`.

NAVIGATION INTEGRATION

- The "Bottles" link in the nav already exists but points to "#". Update it to point to "/bottles"
 - Add an active state to the nav link when on the /bottles page (amber underline or text color change)
 - The page should import Navigation and Footer from existing components
-

TECHNICAL REQUIREMENTS

- "use client" directive on all components
 - TypeScript interfaces for all props and data
 - Framer Motion for all animations (scroll reveals, card hovers, detail panel enter/exit)
 - Debounced search input (300ms) — filter client-side against the static bottle data
 - URL search params for filters: `/bottles?tier=unicorn&sort;=secondary` so filtered views are shareable
 - Responsive: 3 col → 2 col → 1 col. Sticky filter bar. Touch-friendly on mobile.
 - The detail panel should animate in with Framer Motion (slide from right + fade, 300ms, ease-out)
 - Lazy render cards below the fold — use intersection observer or Framer Motion's `whileInView`
-

DESIGN PHILOSOPHY

This page is the intellectual core of Proof. It should feel like walking into a private tasting room, not browsing a product catalog. Every element should reinforce that this data is **valuable** and **exclusive**.

Do:

- Use generous whitespace between cards — let them breathe
- Make the price comparison (MSRP vs secondary) the visual centerpiece of each card
- Use JetBrains Mono for all numerical data — it signals precision and intelligence
- Make the multiplier badge feel like a shocking revelation ("10x" should hit hard)
- Use the amber accent very sparingly — only on interactive elements, prices, and tier indicators
- The detail panel should feel like opening a dossier, not a product page

Do not:

- Do not use bottle images — we don't have licensed photos. The data IS the visual.
 - Do not make it look like a generic e-commerce grid
 - Do not use gradients on text
 - Do not add decorative elements that don't serve a purpose
 - Do not make every card glow amber — reserve glow for unicorn tier only
 - Do not use the GlassCard component for bottle cards — build a custom card that fits the intelligence aesthetic
-

FILES TO CREATE / MODIFY

Create:

- `src/app/bottles/page.tsx` — The main page component
- `src/data/bottles.ts` — Typed bottle data (extracted + enriched from BOTTLE_PRICING)
- `src/components/sections/BottleGrid.tsx` — The grid with search, filters, and cards
- `src/components/BottleCard.tsx` — Individual bottle card component
- `src/components/BottleDetail.tsx` — Slide-out detail panel
- `src/components/BottleFilterBar.tsx` — Sticky search + filter bar

Modify:

- `src/components/Navigation.tsx` — Update Bottles link href to `"/bottles"`
- `src/components/sections/DropFeed.tsx` — Import bottle data from shared `src/data/bottles.ts` instead of inline BOTTLE_PRICING

REFERENCE: EXAMPLE CARD DATA

Here is what one fully populated bottle card should display, to make the expected output concrete:

Field	Value
Bottle Name	Pappy Van Winkle 23 Year
Distillery	Old Rip Van Winkle Distillery
Tier	UNICORN
MSRP	\$299
Secondary	\$3,000–\$4,500
Multiplier	10x
Proof	95.6
Age	23 Year
Flavors	Caramel, Dark Chocolate, Dried Fruit, Oak, Leather
Last Seen	March 18, 2026 — Wake County
Frequency	~0.3 drops/month (very rare)

FINAL NOTES

This page should be the reason someone upgrades from free to paid. When a bourbon hunter lands here and sees the secondary market data, the multiplier badges, and the drop history timeline — they should immediately understand the value of a Proof membership. Build it like you're building the most exclusive bourbon

intelligence tool that has ever existed.

Do not add new npm packages without approval. Use only what is already in package.json (Next.js, React, Framer Motion, Lucide React, Zustand, Tailwind).
